73TRTK Return Line Kit Installation

The picture is of old used parts and only used to illustrate the changes to the right rear injector return connection. Also note that the 3-way tees, that are the third ones back on each bank are no longer available. They will be replaced with plastic tees installed in the return line on each side.

The original right rear injector return line tee is no longer available. In this kit we have substituted a double return tee, with a plug and clamp.

1. Install the silicone plug on the unused port and install the single green clamp on the plug.
2. The red clamps are for installation on the 1/4 inch hose.
3. Assemble the remainder of the return tees and hoses like it was originally.

*** Note a new picture will be available once we are able to mock it up, due to the obsolescence of the 3-way tees. ***
